Introduction

Maison Rue presents collections for men, women and children through a restrained fashion storefront. Customers can explore materials and variants, save favourites, place orders and follow service requests.

Discover and choose
Browse seasonal edits, material collections and product categories. Compare colour, size, fit, price and care information before purchasing.

Purchase and follow up
Manage a shopping bag, select delivery details, apply eligible offers and track orders. Delivered items can enter a structured return or exchange process.

Operate and manage
Staff handle orders, inventory and returns. Administrators additionally manage employees, promotions, financial reports and product insights.

Technology

The storefront and operational portals share a React application, an Express API and a Microsoft SQL Server database.

Frontend
React 19, React Router 7 and Vite 8 provide page rendering, navigation and development builds. Context providers manage authentication, cart and favourites.

Backend and persistence
Node.js and Express expose APIs for products, accounts, orders, promotions, reporting and returns. SQL Server stores operational records, product variants and transaction history.

Access and integrations
Role checks protect customer, staff and administrator routes. Authentication uses JWT and password hashing with bcrypt. Google address services and the Rue assistant depend on configured external API access.

Website features

Customer

Collections, filters, search, variant selection, fit guide, guest wishlist, Complete the Look, cart, checkout, promo codes, orders, profile, addresses, reviews and return requests.

Staff

Dashboard, order fulfilment, payment confirmation, inventory and stock movements, return receipt and physical inspection.

Administrator

Employee management, order oversight, promotions and approvals, revenue reports, product insights, review moderation and returns.

Integrated services

Rue assistant, Google address suggestions and EmailJS workflows depend on configured services. Recommendation and return triage logic are rule based.

Data structure

Task assignment

Workstream	Scope	Owner
Customer experience	Catalogue, accounts, checkout, favourites and reviews	To be assigned
Operations	Orders, inventory and returns	To be assigned
Administration	Promotions, employees and reports	To be assigned
Infrastructure	SQL schema, API, integrations and verification	To be assigned

Named ownership and completion dates are completed by Team 1.

Thank you

Maison Rue connects fashion discovery, purchase and after sales service.
